## Abdominal Aorta Aneurysm

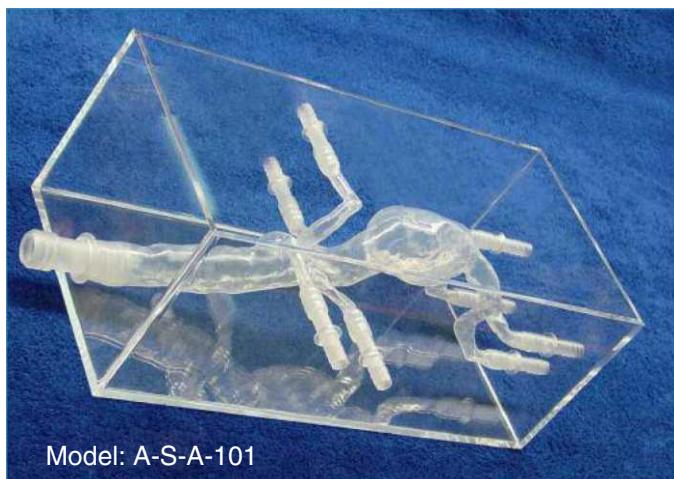

### Model: A-S-A-101

Shelley Medical's silicone vascular models are ideal for the development, testing and validation of endovascular interventional devices. They provide a realistic anatomy for the simulation of endovascular procedures, pre-surgery training, research studies and teaching purposes.

These models are compatible with modern imaging modalities such as digital subtraction angiography, computed tomography and magnetic resonance imaging. Providing the use of an adequate circulating fluid, Doppler techniques can also be performed. The in vitro models transparency to light makes them suitable for video and photographic monitoring.
